十一、回到家中，龙龙读了一本科普读物。请你一起读一读，完成任务。(10 分)

Water is the "life blood" of our earth. It is everywhere around us. It is also in the air. It runs through mountains and valleys. It forms rivers, lakes and oceans.

Nature has a great water system. Rain water goes to lakes and rivers. It runs into the oceans. At the mouths of the rivers, fresh water joins the salt water of the oceans.

Water helps to keep plants alive and let them grow. People and other animals need water to live. We drink water and use it to do many things, such as washing dirty things.

It is important to care for the earth's water. We should keep waste and rubbish away from water and keep it from becoming dirty and smelly. Polluted water is dirty, and it makes people, plants and animals ill.

People have to protect(保护) the earth and work with nature.
